

Wallingford Health Department

Mpox (previously called Monkeypox)

DANIELA BABCOCK, B.S.

EPIDEMIOLOGIST

DECEMBER, 2022

WHO recommends new name for monkeypox disease: Mpox

- WHO will begin using a new term “mpox” as a synonym for monkeypox. Both names will be used simultaneously for one year while “monkeypox” is phased out.
- When the outbreak of monkeypox expanded earlier this year, racist and stigmatizing language online, in other settings and in some communities were observed and reported to WHO.
- In several meetings, public and private, a number of individuals and countries raised concerns and asked WHO to propose a way forward to change the name.
- WHO, in accordance with the ICD update process, held consultations to gather views from a range of experts, as well as countries and the general public, who were invited to submit suggestions for new names.
- WHO will adopt the term mpox in its communications, and encourages others to follow these recommendations, to minimize any ongoing negative impact of the current name and from adoption of the new name.

Maurizio de Angelis/Science photo library: Mpox virus, illustration. Monkeypox virus particles are composed of a DNA (deoxyribonucleic acid) genome surrounded by a protein coat and lipid envelope.

2022 Mpox Outbreak Cases & Data (Global)

CASES

- Total cases: 82,021
- Locations that have not historically reported mpox: 81,048
- Locations that have historically reported mpox: 973

- Locations with cases: 110
- Locations that has not historically reported mpox: 103
- Locations that has historically reported mpox: 7

DEATHS

- Total deaths: 64
- Locations that have not historically reported mpox: 51
- Locations that have historically reported mpox: 13

- Locations with cases: 16
- Locations that has not historically reported mpox: 13
- Locations that has historically reported mpox: 3
